

the miracle of live streaming

01

7 x **HD cameras** including two on chase boats, one static camera on the race favourite and two drones will capture all the action.

02

On board **transmitters** send to any one of several **4G towers** in the area

03

The **data** is then sent to servers in the **cloud** that **re-assemble** the gigabites of info into **high definition video**

04

The **4G** network then delivers the **HD video** back to our Race Production Centre at the QCYC Club House

05

- We take the **incoming video feed** from all **cameras**
- create the broadcast and finally transmit via the **4G network**
- again to the **Facebook Cloud Servers** and **designated,**
- **websites** for any **smart device** anywhere on earth

From the water - to the world - in less than 5seconds!!
